

ACTIVITY-

Decode the chart

1) Regional comparison

i) what is it telling you?

The chart compares student enrollment in four regions. Delhi has the highest enrollment at about 444 students, while Bhopal has the lowest at about 418 students. Jaipur & coimbatore are both around 441 students.

ii) Do you trust it?

Partially. The comparison is easy to understand, but the Y-axis starts around 410 instead of 0, which makes the difference between regions looks larger than they actually are.

2) Budget Allocation by Department

i) what is it telling you?

The pie chart shows how the total budget is divided among 12 department/ categories. Some department receive a much larger share of the budget.

ii) Do you trust it? why?

Not completely. The chart has many categories. A bar chart with labels would make the comparison easier.

3) Coffee consumption vs productivity scores.

What is it telling you?

The chart shows that coffee consumption and productivity generally increase over time.

ii) Do you trust it?

Partially. The two lines appear to increase together, but the chart only shows a relationship. It does not prove that drinking more coffee causes higher productivity.
