* chart 1:

1) what is this chart trying to show?

Soln: It is trying to compare the different categories and show the difference between their values.

2) what's wrong with the color choice?

Soln: The colors are too bright and inconsistent which makes the chart confusing and can make some categories appear more important than other.

3) propose a better color scheme?

Soln: use a simple, consistent color palette with similar shades for related categories and one contrasting color only for an important category.

* chart 2:

1) what is this chart trying to show?

Soln: It is trying to show the distribution or comparison of different groups using different colors.

2) what's wrong with the color choice?

Soln: Too many contrasting colors make the chart difficult to read. The colors may also give the impression the some categories

are more important even when they are not.

3) propose a better color scheme?

soln: use a limited palette of 3-5 clear colors, with similar shades for related groups and a single contrasting color for highlighting a specific value.
